SUMMARY

Since 2018, my job has been checking work before it ships: print files, machines, and consumer tech. I catch errors early, follow specs exactly, train teammates, and help automate the work. Now I want to do the same work for AI: rate answers, spot wrong facts, and follow scoring guides the same way every time. I build AI tools in my own time, and I'm currently taking Google and DeepLearning.AI courses.

EXPERIENCE

Production Print Specialist — Online Labels **2020 – Present**

Fix digital print files in Photoshop and Illustrator before they reach the press. Help automate workflows so errors get caught earlier.

Electronics & Technology Specialist — Target **2019 – 2020**

Promoted to Technical Trainer within two months and trained four new teammates on electronics, systems, and inventory.

Press Machine Operator — HM Golf Products **2018 – 2019**

Troubleshot production machinery to limit downtime, and held quality-control standards on the line.

PROJECTS

PrintOpti — Rust tool built for print production. Paste in a production schedule and it plans the best cardstock use and makes the pull sheet. The web version runs fully in the browser — nothing is uploaded.

HQ Board — One screen that shows the true state of all my projects, and what needs me first. Passcode-protected, in plain words. (Next.js, TypeScript, React)

AI Deal Tray — Windows tool that compares AI models by real value, not headline price. It checks live prices, applies quality gates first, and shows the cost per job. (Python, PySide6)

SKILLS

AI: Prompting, Model Output Evaluation, Fact-Checking AI Output, Data Quality Review, AI Applications

Development: Rust, TypeScript, React, Next.js, Python, JavaScript, HTML & CSS

Operations: Quality Control, Workflow Automation, Troubleshooting, Technical Training, Client Communication

Tools: Photoshop, Illustrator

EDUCATION

Wiltshire College & University Centre — Diploma, Computer/Information Technology Administration and Management **2010 – 2011**

CERTIFICATIONS — IN PROGRESS

Google AI Essentials (Google) · AI for Everyone (DeepLearning.AI) · Generative AI for Everyone (DeepLearning.AI)
